We Ensure Our OCXOs Are Ultra Low Phase Noise

Using multiple test equipment options specific for frequency of interest

Modern instrumentation equipment, commercial and defense communication systems, and radar require excellent stability and extremely low phase noise frequency sources. After in depth research and investigation, we fully phase noise characterize our OCXOs. We utilize the most thorough phase noise testing methods based on application for low frequency ULPN OCXOs, 100.000 MHz ULPN OCXOs, and ULPN OCXOs with analog harmonic and PLL multiplications.
